

PV207 TEAM PROJECT

Nutri Prep

Team:

- Lucia Bušniaková (Project Manager + Process analyst)
- Ivan Yatskiv (Process analyst + Integration developer)
- Shweta Shree Sharma (Business analyst)

Organisation overview

Vision

"To help busy professionals eat healthy meals every day without losing their time, energy, or quality."

Mission

"To provide healthy, ready-planned daily meals via a simple ordering system. We combine nutrition knowledge, customer preferences, and careful preparation to make sure every meal is balanced, fresh, and consistent."

Organisation structure

Departments

Nutri Prep is organized as a small startup with a lean structure. Instead of having many separate departments, the company works through a few compact functional areas. Each area is responsible for a key part of the service, but cooperation between roles is important because the team is small.

Management

Management is represented by the Founder / CEO. This area is responsible for the overall direction of the company, business planning, finances, partnerships, and coordination between the rest of the team.

Nutrition and Kitchen

This area is responsible for creating healthy meal options, checking nutritional quality, preparing recipes, managing food preparation, and making sure that meals are fresh, safe, correctly portioned, and properly labelled.

Operations and Delivery

This area manages ingredient planning, supplier communication, inventory, delivery preparation, and customer order dispatch. It also monitors whether deliveries are completed on time and whether resources are used efficiently.

Technology

Technology supports the ordering system, customer portal, kitchen planning, data collection, and basic reporting. Since Nutri Prep is a small company, this area is handled by one Tech Specialist and may use external support when needed.

Customer Support and Administration

This area handles customer communication, order changes, complaints, feedback collection, and simple administrative tasks. It helps the company understand customer needs and improve the service.

Roles and responsibilities

Founder / CEO

Responsible for business strategy, financial decisions, partnerships, team coordination, and overall company performance. The Founder/CEO makes key business decisions and ensures that Nutri Prep remains aligned with its vision and goals.

Head Nutritionist

Responsible for menu planning, nutritional balance, dietary requirements, and meal quality from a nutrition perspective. The Head Nutritionist defines nutrition standards, prepares meal concepts, and checks that meals support the company's healthy eating promise.

Kitchen Manager

Responsible for daily kitchen operations, food preparation planning, staff coordination, recipe execution, portion control, and food safety during production. The Kitchen Manager ensures that meals are prepared on time and according to defined standards.

Kitchen Team

Responsible for preparing meals according to recipes and kitchen instructions. The team supports portioning, packing, basic cleaning, and maintaining food safety during preparation.

Food Quality Assistant

Responsible for checking meal quality, freshness, portion accuracy, allergen labels, and basic quality records. This role helps prevent mistakes before meals are packed and delivered.

Operations Manager

Responsible for supplier communication, ingredient planning, inventory control, delivery preparation, cost monitoring, and operational efficiency. The Operations Manager makes sure the company has the right ingredients and resources available.

Delivery Team

Responsible for transporting meals to customers safely and on time. The Delivery Team follows planned routes, handles meals carefully, and reports delivery problems or delays.

Tech Specialist

Responsible for the ordering system, customer portal, internal tools, data collection, and basic technical support. The Tech Specialist helps automate manual work and supports reporting for business indicators.

Customer Support & Admin Assistant

Responsible for customer communication, order questions, changes, complaints, feedback collection, and simple administrative support. This role is often the first contact point for customers and helps maintain customer satisfaction.

Goals and objectives

GOAL 1: Build Trust in the Healthy Meal Delivery Market

Nutri Prep aims to become the number one trusted choice for busy, health-conscious professionals within the next 12–18 months. Our focus is to prove that the company can deliver healthy, reliable, and high-quality meals every day.

Targets:

- 500–1,000 active customers
- Net Promoter Score (NPS) 60 or higher
- Customer satisfaction score 8/10 or higher
- Zero allergen incidents

GOAL 2: Create a Sustainable and Scalable Business

Nutri Prep will build a chain of kitchen processes, ordering systems, and supplier partnerships that can scale from 100 to more than 1,000 customers. Our goal is to keep quality consistent while controlling costs and reducing waste.

Targets:

- Operational costs below 60% of revenue
- Food waste below 5%
- On-time delivery rate of 99% or higher

G1. Build Trust in the Healthy Meal Delivery Market

O1.1 Maintain nutritional quality

- 1.1.1 **KPI:** Percentage of meals passing daily nutritional check per production day
 - at least 90%
- 1.1.2 **KRI:** Number of nutritional non-compliance cases per month
 - Risk limit: more than 10% of checked meals do not meet nutritional specifications per month

O1.2 Guarantee safety & allergen management

- 1.2.1 **KPI:** Number of allergen label checks completed before meal dispatch per day
 - 100% of meals checked
- 1.2.2 **KRI:** Number of allergen-related incidents per month
 - Risk limit: any incident/month

O1.3 Deliver a great customer experience

- 1.3.1 **KPI:** Number of unresolved customer requests per day
 - fewer than 10 unresolved requests/day
- 1.3.2 **KRI:** Average customer satisfaction score per month
 - Risk limit: below 8/10

O1.4 Offer choice without creating complexity

- 1.4.1 **KPI:** Average time needed to complete weekly meal selection
 - 5 minutes or less
- 1.4.2 **KRI:** Meal selection abandonment rate per month
 - Risk limit: more than 20% abandoned selections/month

O1.5 Build brand trust

- 1.5.1 **KRI:** Number of verified customer reviews and ratings collected per week
 - at least 10 reviews per week
- 1.5.2 **KPI:** Average public rating per month
 - Risk limit: below 4.5/5

G2. Create a Sustainable and Scalable Business

O2.1 Improve kitchen workflows

2.1.1 **KPI:** Number of meals produced per kitchen shift

- more than 500 meals per shift

2.1.2 **KRI:** Average food waste percentage per month

- Risk limit: above 5%

O2.2 Use demand forecasting

2.2.1 **KPI:** Forecast accuracy for next-day ingredient planning

- at least 85% accuracy/day

2.2.2 **KRI:** Number of ingredient shortages or surpluses per month

- Risk limit: more than 5 cases/month

O2.3 Build reliable delivery

2.3.1 **KPI:** Number of delayed deliveries per day

- fewer than 1% delayed deliveries/day

2.3.2 **KRI:** Monthly on-time delivery rate

- Risk limit: below 95%

O2.4 Build scalable systems

2.4.1 **KPI:** Percentage of orders processed without manual correction per day

- at least 80%

2.4.2 **KRI:** Number of system failures or manual workarounds per month

- more than 10 per month

O2.5 Reach healthy unit economics

2.5.1 **KPI:** Daily operating cost as percentage of daily revenue

- below 60%

2.5.2 **KRI:** Monthly operating cost as percentage of monthly revenue

- above 70%

Measurement indicator guidelines

Nutri Prep uses a small set of indicators to check whether the company is meeting its business objectives. Each indicator is linked to a specific objective and has a defined unit, time frame, target value, and risk limit.

KPIs are used for short-term monitoring of daily or weekly operations, such as meal quality, order processing, kitchen work, delivery, and customer feedback. KRIs are reviewed less often, usually weekly or monthly, and help the team notice risks or negative trends before they become serious problems.

Because Nutri Prep is a small company with around 10-12 employees, most indicators are monitored by the responsible team leads as part of their regular work. Data comes mainly from the ordering system, kitchen checks, delivery records, customer feedback, and simple financial reports.

If an indicator reaches its risk limit, the responsible person discusses the issue with the founder or the relevant team lead and agrees on a practical corrective action, such as improving a checklist, adjusting the menu, changing delivery planning, or reviewing supplier cooperation.

Processes

1. Customer Meal Ordering Process
2. Nutrition and Allergen Validation Process
3. Demand Forecasting and Ingredient Planning Process
4. Supplier Ordering and Inventory Replenishment Process
5. Meal Preparation and Quality Control Process
6. Delivery Planning and Dispatch Process

Process 1: Customer Meal Ordering Process

Description

The customer selects meals, adds preferences or allergens, enters delivery details, and confirms the order.

The confirmed order is then used for kitchen and delivery planning.

Related objectives

- O1.3 Deliver a Great Customer Experience
- O1.4 Offer Choice Without Creating Complexity
- O2.2 Use Demand Forecasting
- O2.4 Build Scalable Systems

Indicators and metrics (measured on the process)

- O1.3 KPI: Unresolved customer requests per day
 - units [number of requests/day]
 - desired value [fewer than 10]
- O1.4 KPI: Average meal selection time
 - units [minutes]
 - desired value [5 minutes or less]
- O2.4 KPI: Orders processed without manual correction
 - units [percentage]
 - desired value [at least 80%]
- Process metric: Order completion rate
 - units [completed orders / started orders x 100]

Roles involved

- Customer
 - selects meals and confirms the order
- Customer Support & Admin Assistant
 - helps with order issues
- Tech Specialist
 - keeps the ordering system working
- Operations Manager
 - uses confirmed orders for planning

Data objects

- Customer profile
 - description [contact details, preferences, allergens]
- Meal selection
 - description [selected meals and quantities]
- Order
 - description [confirmed order and delivery details]
- Payment confirmation
 - description [payment result]
- Order confirmation
 - description [summary sent to the customer]

Diagram

Process 2: Nutrition and Allergen Validation Process

Description

Meals are checked for nutrition values and allergen information before they are published or delivered.

Related objectives

- O1.1 Maintain Nutritional Quality
- O1.2 Guarantee Safety & Allergen Management
- O1.5 Build Brand Trust

Indicators and metrics (measured on the process)

- O1.1 KRI: Nutritional non-compliance cases per month
 - units [percentage of checked meals/month]
 - desired value [risk limit: more than 10%]
- O1.2 KPI: Allergen label checks before dispatch
 - units [percentage of meals checked]
 - desired value [100%]
- O1.2 KRI: Allergen incidents per month
 - units [number of incidents/month]
 - desired value [risk limit: any incident]
- Process metric: Meals needing label correction
 - units [number of meals]
 - desired value [0 before dispatch]

Roles involved

- Head Nutritionist
 - checks nutrition and allergens
- Food Quality Assistant
 - checks labels and records issues
- Kitchen Manager
 - makes sure kitchen rules are followed
- Tech Specialist
 - updates meal data in the system

Data objects

- Recipe
 - description [ingredients and nutrition values]
- Allergen list
 - description [allergens in meals]
- Nutrition validation record
 - description [result of nutrition check]
- Allergen check record
 - description [result of label check]
- Meal label
 - description [information shown to the customer]

Diagram

Process 3: Demand Forecasting and Ingredient Planning Process

Description

Confirmed orders are used to estimate the number of meals and ingredients needed for the next production period.

Related objectives

- O2.1 Improve Kitchen Workflows
- O2.2 Use Demand Forecasting
- O2.5 Reach Healthy Unit Economics

Indicators and metrics (measured on the process)

- O2.2 KPI: Forecast accuracy
 - units [percentage/day]
 - desired value [at least 85%]
- O2.2 KRI: Ingredient shortages or surpluses per month
 - units [number of cases/month]
 - desired value [risk limit: more than 5 cases]
- O2.1 KRI: Monthly food waste
 - units [percentage/month]
 - desired value [risk limit: above 5%]
- Process metric: Difference between planned and used ingredients
 - units [planned amount - used amount]
 - desired value [as low as possible]

Roles involved

- Operations Manager
 - prepares the forecast and ingredient plan
- Kitchen Manager
 - confirms production needs
- Head Nutritionist
 - checks recipe requirements
- Founder / CEO
 - reviews cost impact when needed

Data objects

- Confirmed orders report
 - description [orders for the next period]
- Demand forecast
 - description [expected meal quantities]
- Ingredient plan
 - description [needed ingredients]
- Inventory record
 - description [current stock]
- Waste report
 - description [unused or discarded ingredients]

Diagram

Process 4: Supplier Ordering and Inventory Replenishment Process

Description

Stock is checked, missing ingredients are ordered, deliveries are received, and inventory is updated.

Related objectives

- O2.1 Improve Kitchen Workflows
- O2.2 Use Demand Forecasting
- O2.5 Reach Healthy Unit Economics

Indicators and metrics (measured on the process)

- O2.2 KRI: Ingredient shortages or surpluses per month
 - units [number of cases/month]
 - desired value [risk limit: more than 5 cases]
- O2.5 KPI: Daily operating cost as a percentage of revenue
 - units [percentage/day]
 - desired value [below 60%]
- O2.5 KRI: Monthly operating cost as a percentage of revenue
 - units [percentage/month]
 - desired value [risk limit: above 70%]
- Process metric: Supplier delivery accuracy
 - units [correctly delivered items / ordered items x 100]
 - desired value [at least 95%]

Roles involved

- Operations Manager
 - orders ingredients and tracks stock
- Kitchen Manager
 - reports missing ingredients
- Food Quality Assistant
 - checks delivered ingredients
- Founder / CEO
 - approves larger cost decisions

Data objects

- Supplier order
 - description [ordered ingredients and prices]
- Purchase request
 - description [internal request for ingredients]
- Delivery note
 - description [delivered items]
- Inventory record
 - description [current stock]
- Supplier invoice
 - description [cost document]

Diagram

Process 5: Meal Preparation and Quality Control Process

Description

Meals are prepared, portioned, packed, and checked before they leave the kitchen.

Related objectives

- O1.1 Maintain Nutritional Quality
- O1.2 Guarantee Safety & Allergen Management
- O2.1 Improve Kitchen Workflows
- O2.3 Build Reliable Delivery

Indicators and metrics (measured on the process)

- O2.1 KPI: Meals produced per shift
 - units [number of meals/shift]
 - desired value [more than 500]
- O1.1 KPI: Meals passing nutritional check
 - units [percentage]
 - desired value [at least 90%]
- O1.2 KPI: Allergen label checks before dispatch
 - units [percentage of meals checked]
 - desired value [100%]
- Process metric: Meals returned for rework
 - units [number of meals]
 - desired value [as low as possible]

Roles involved

- Kitchen Manager
 - coordinates daily preparation
- Kitchen Team
 - prepares and packs meals
- Food Quality Assistant
 - checks quality and labels
- Head Nutritionist
 - helps with nutrition-related issues

Data objects

- Production plan
 - description [meals to prepare]
- Recipe
 - description [preparation instructions]
- Meal batch
 - description [prepared group of meals]
- Quality control checklist
 - description [checks before dispatch]
- Packed meal
 - description [meal ready for delivery]

Diagram

Process 6: Delivery Planning and Dispatch Process

Description

Packed meals are grouped by route and delivered to customers within the planned time window.

Related objectives

- O1.3 Deliver a Great Customer Experience
- O2.3 Build Reliable Delivery
- O2.4 Build Scalable Systems

Indicators and metrics (measured on the process)

- O2.3 KPI: Delayed deliveries per day
 - units [percentage/day]
 - desired value [fewer than 1%]
- O2.3 KRI: Monthly on-time delivery rate
 - units [percentage/month]
 - desired value [risk limit: below 95%]
- O1.3 KRI: Customer satisfaction score per month
 - units [score/month]
 - desired value [risk limit: below 8/10]
- Process metric: Average delivery delay
 - units [minutes]
 - desired value [less than 10 minutes]

Roles involved

- Operations Manager
 - plans delivery routes
- Delivery Team
 - delivers meals and reports problems
- Customer Support & Admin Assistant
 - contacts customers if needed
- Tech Specialist
 - supports delivery tracking

Data objects

- Delivery route
 - description [planned stops and times]
- Packed order
 - description [order ready for delivery]
- Delivery status
 - description [current order status]
- Customer contact details
 - description [delivery contact information]
- Delay report
 - description [reason for delay]
